

Systems of Equations: Solve by Graphing

A) Graph the equation $y = 2x - 1$ on the grid.

B) Graph the equation $y = \frac{1}{2}x + 2$ on the same grid.

C) Do the equations $y = 2x - 1$ and $y = \frac{1}{2}x + 2$ have any solutions in common? How do you know?

A set of two or more equations is called a **system of equations**. A solution of a system is an **ordered pair** that satisfies both equations.

Examples:

a. $(6, -10)$	b. $(0, 2)$	c. $(-9, -10)$	d. $(14, 9)$

2. Which ordered pair(s) is/are a solution(s) to $4x - 5y = 30$?

a. $(20, 10)$	b. $(10, -14)$	c. $(2, 2)$	d. $(-6, 0)$
---------------	----------------	-------------	--------------

3. Which ordered pair(s) is/are a solution(s) to $4x - y = 9$?

a. $(-10, 9)$	b. $(2, -1)$	c. $(-5, -2)$	d. $(7, 22)$
