$\qquad$ Period: $\qquad$

1. Four times the sum of twice a number and eight is the same as the quotient of the square of that number and negative nine.
2. Three less than five times a number is greater than three times the difference of negative seven and that number.
3. The product of three and a number is less than five more than the quotient of that number and six.
4. Negative four times the difference of two and twice a number is equal to seventeen decreased by the product of three and that number.
5. The quotient of five less than a number and negative eight is greater than or equal to three times the sum of four times that number and one.
4.3 Translating Formative Assessment
