

System of Linear and Quadratic Equations: WORD PROBLEMS

1. Use substitution to find your solution.

The height of a ball “ x ” seconds after it was thrown is modeled by the equation $y = -16x^2 + 67x$, where y is its height in feet above the ground. At the same time, a bird flying through the air had a height of $y = 3x + 48$.

- Solve the system to find the time(s) when the ball and the bird were at the same elevation.
- What is the elevation at that time(s)?
- Do you need all of the answers you found? Why or why not?

2. Graph to find your solution.

A rocket is launched from the ground and follows a parabolic path (parabola) represented by the equation $y = -x^2 + 10x$. At the same time a flare is launched from a height of 10 feet and follows a linear path (line) represented by the equation $y = -x + 10$.

- Find the coordinates of the point or points where the paths intersect.
- What is the height or heights of intersection?
- Do you need all of the answers you found? Why or why not?

3. Use any method to find your solution.

A pelican flying in the air over water drops a crab from a height of 30 feet. The distance the crab is from the water as it falls can be represented by the equation $y = -16x^2 + 30$, where “ x ” is time, in seconds. To catch the crab as it falls, a seagull flies along a path represented by the equation $y = -8x + 15$.

- Can the gull catch the crab before the crab hits the water?
- Do you need all of the answers you found? Why or why not?

4. Use any method to find your solution.

The “Jump Shot” company sells basketballs. The amount of money, “ y ” that the company takes in from selling “ x ” basketballs per day is modeled by the equation $y = -2x^2 + 40x$. The amount of money “ y ” that it costs the company to make “ x ” basketballs per day is modeled by the equation $y = 10x + 100$.

- Solve the system to find the number of basketballs sold each day to break even.
- How much money was earned on these days?
- How many basketballs per day may “Jump Shot” sell in order to make a profit?
